II B.Tech I Sem Supplementary Examination, January-2017

## METALLURGY AND MATERIAL SCIENCE

(MECH)

- Note: 1. This question paper contains two parts A and B.  
 2. Part A is compulsory which carries 25 marks. Answer all Questions in Part A.  
 3. Part B consists of 5 units. Answer any one full question from each unit. Each Question Carries 10 marks and a, b, c as sub questions.

### PART –A

- |                                                 |    |
|-------------------------------------------------|----|
| 1. a) Define crystal?                           | 2M |
| b) What is the necessity of alloying?           | 2M |
| c) Briefly explain about BCC.                   | 2M |
| d) What is a Solid solution?                    | 2M |
| e) What is a Phase?                             | 2M |
|                                                 |    |
| 2. a) Explain the Allotropic forms of Iron?     | 3M |
| b) What are plain carbon steels?                | 3M |
| c) What is Hardenability?                       | 3M |
| d) What is Crystallisation?                     | 3M |
| e) What are Matrix and reinforcement materials? | 3M |

### PART – B

- |                                                                                                                                   |     |
|-----------------------------------------------------------------------------------------------------------------------------------|-----|
| 3. Describe the structure of a grain boundary? What are the effects of grain boundaries on the properties of metal?               | 10M |
| <b>(OR)</b>                                                                                                                       |     |
| 4. What are the types of Solid solutions? Explain.                                                                                | 10M |
|                                                                                                                                   |     |
| 5. Explain the Binary Isomorphous alloy Phase diagram? Write the conditions favourable for formation of Binary Isomorphous alloy? | 10M |
| <b>(OR)</b>                                                                                                                       |     |
| 6. Explain the Fe-Fe <sub>3</sub> C (Iron –Iron carbide ) phase diagram with a neat sketch.                                       | 10M |
|                                                                                                                                   |     |
| 7. What are the types of Cast Irons? Write the properties and applications of any two types?                                      | 10M |
| <b>(OR)</b>                                                                                                                       |     |
| 8. Explain the following.                                                                                                         |     |
| a) Full Annealing.                                                                                                                | 4M  |
| b) Normalizing.                                                                                                                   | 3M  |
| c) Hardening.                                                                                                                     | 3M  |
|                                                                                                                                   |     |
| 9. Explain the properties and applications of Aluminium alloys.                                                                   | 10M |
| <b>(OR)</b>                                                                                                                       |     |
| 10. What are the various types of Glasses? Write the properties and applications of them?                                         | 10M |
|                                                                                                                                   |     |
| 11. Explain the following.                                                                                                        |     |
| a) Particle –reinforced materials                                                                                                 | 5M  |
| b) Fiber- reinforced materials                                                                                                    | 5M  |
| <b>(OR)</b>                                                                                                                       |     |
| 12. a) Explain the continuous –Fiber reinforced Metal Matrix composites.                                                          | 5M  |
| b) Explain the Discontinuous Fiber reinforced Metal Matrix composites.                                                            | 5M  |
