Read the following passage carefully and answer questions 46 to 50 :

A little local censorship is less of an evil compared to messages being fully scrubbed out from the public domain worldwide. That would seem to be the logic behind micro-blogging website Twitter's proposed system of reactively withholding tweets in a specific country when there is a valid request from a legal authority. Under it, if such a request is received, some of the messages of users will go missing on the service, and only show up as a box declaring that they have been "withheld". The jury is out on whether the new system will silence activists and campaigners; already, some users are talking of workarounds. Twitter acquired a reputation for aiding mass protests and creating strong social networks, notably in

the Arab Spring and Occupy movements. Whether or not revolutions are fanned by determined 'tweeple', even 140 characters with a strong message can be too much for authoritarian regimes. Rulers in many countries are uncomfortable that Twitter is now a household name, and its reach, at a billion tweets put out every four days, nightmarish. The actual effects of the micro-censorship are yet to unfold, but activists have a point when they say internet giants are too willing to make compromises on online freedoms in return for expanded business opportunities.
