CLASS-XI COMPUTER SCIENCE

Time Allowed: 3 Hrs. Maximum Marks: 70

General Instructions:

All the questions are compulsory.

The paper contains 7 questions.

 $Programming\ language\ used: C++$

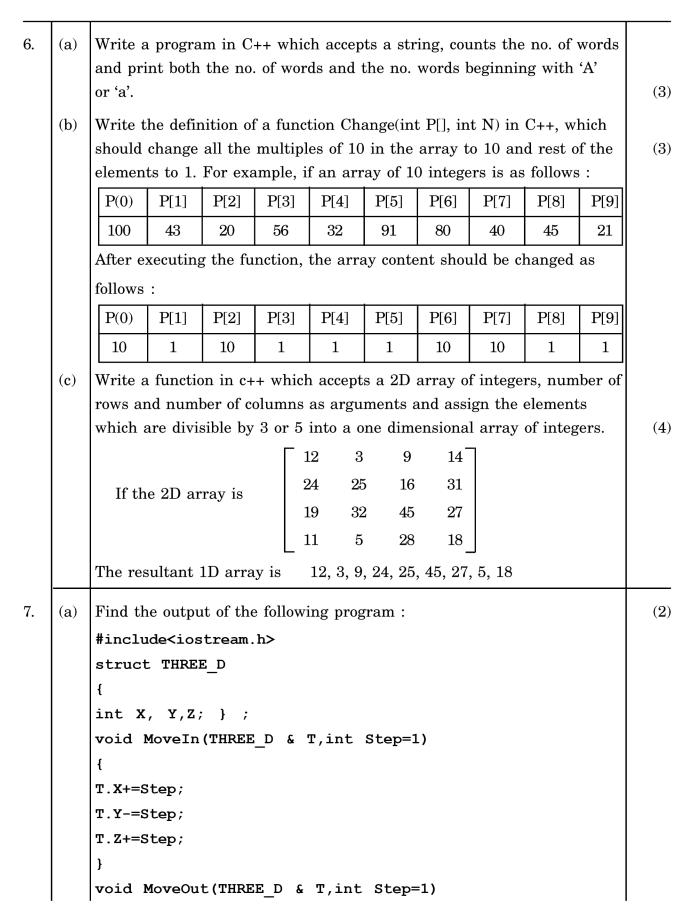

S. No.	Sub Part	Question	Marks
1.	(a)	Why is Mobile operating system Android more popular?	(1)
	(b)	Expand GUI and BOSS.	(1)
	(c)	What utilities / programs will you use to perform the following tasks:	(2)
		(i) Reduce the size of files so that it becomes easier to transmit them on the network.	
		(ii) Scan the hard disk for fragmented files and bring all the fragments together to optimise storage.	
	(d)	Convert the following:	(4)
		(i) $(C92)_{16} = (?)_2$	
		(ii) $(10111.101)_2 = (?)_{10}$	
		(iii) $(1011.001)_2 = (?)_8$	
		(iv) $(44)_{10} = (?)_{16}$	
	(e)	Differentiate between Booting and POST (Power On Self Test)	(2)
2.	(a)	(i) Declare a variable that keeps a constant value 30 that cannot be altered later on.	(3)
		(ii) Declare a variable that can store a name with at most 20 alphabets.	
		(iii) Declare an integer identifier which can never take a negative value	
	(b)	Convert the following single conditional statement to if-else:	(2)
		disc = (qty > 50) ? 10 : 0;	

```
Write a program in C++ that takes Height in inches as input and display
    (c)
         the height in feet and inches.
                                                                                   (3)
         e.g. if the input is :28
              the output should be: 2 feet 4 inches.
    (d)
         Identify the type of errors.
                                                                                  (2)
         (i) cout >> "b";
         (ii) x = 0; y = 20/x;
         Name two entry controlled loops.
                                                                                  (1)
    (f)
         What is self documenting code?
                                                                                  (1)
3.
    (a)
         Give the output of the following code fragment
                                                                                  (2)
         int c1,c2;
         int a=-8;
         int b=3;
         c1 = -- a+b;
         c2=a -- +b;
         cout<<"c1= "<<c1 <<","<< "c2 = "<<c2<<end1;
    (b)
         Observe the following C++ code carefully and rewrite the same after
         removing all the syntax error(s) present in the code. Ensure that you
         underline each correction in the code.
                                                                                  (2)
         Important Note:
         - All the desired header files are already included, which are required
         to run the code.
         - Correction should not change the logic of the program.
         #include(iostream.h)
         #define SIZE =3;
         void main()
              {
                 int a[SIZE]={10,20,30,40,50};
                 float x=2;
                 for (i=0, i<SIZE, i++)
                 cout<<a[i]%x;
              }
         Write the name of the header files which is/are essentially required to
         run/execute the following C++ code:
                                                                                  (2)
```

```
void main()
         char ch, word[] = "Magic Box";
         for(int i = 0; word[i] ! = ' \setminus 0'; i++)
         if (word[i] == ' ')
         cout<<endl;
         else
         ch = tolower(word[i];
         cout<<ch;
    (d)
         Determine the number of bytes required to store STOK in C++ with
                                                                                 (2)
         following description:
             Icode (Item code, integer)
             Iname (Item name, string of 10 characters)
             Itype (Item type, Character)
             Price (price of each item, float)
    (e)
         Construct logical expressions to represent the following conditions:
                                                                                 (2)
         (i)
             salary is not in therange 6000 to 7000
         (ii) ch is a lowercase alphabet
         (iii) gender is 'm'
         (iv) a is not equal to 0 or less than 0.
                                                                                 (2)
         Write a program in C++ to input a character and check and print if it
         is a digit or non-digit.
4
         How many times "hello" will printed in the
    (a)
         following code fragment? Give reason.
                                                                                 (2)
         for (i = 0; i < 5; i++);
         cout << "hello";</pre>
        Rewrite the following code using switch-case.
                                                                                 (3)
         char designation;
         cin>> designation;
         if (designation == 'H')
              cout <<"Head of School";</pre>
         else if (designation == 'T')
              cout << "Teaching Staff";</pre>
         else if (designation == 'A')
              cout <<"Admin Department";</pre>
```

```
Give the output of the following C++ program :
                                                                                  (3)
    (c)
              for (int i = 1; i <= 5; i++)
         {
              for (int j=i; j<=5; j++)
                 cout <<i<"@";
             cout <<endl;</pre>
         When do we require a repetitive control structure "do-while" instead of
         "while".
                                                                                  (2)
5.
         In the following code identify the local and global variables:
                                                                                  (1)
    (a)
         int x=9, y=4, z=3; char C='#';
         void Row( int M, int N)
         for ( int J = 1; J \le N ; J + +) cout << M*J;
         cout<<endl;
         }
         void main()
         Row(C, Y);
         Row(X, Z);
    (b)
         Observe the following program RANDNUM.CPP carefully. If the value of
         VAL entered by the user is 5, choose the correct possible output(s) from
         the options from (i) to (iv) and justify your option.
                                                                                  (2)
         //program RANDNUM.CPP
         #include<iostream.h>
         #include<stdlib.h>
         #include<time.h>
         void main()
         randomize();
         int VAL, Rnd; int n=1;
         cin>> VAL;
         Rnd = 2 + random(VAL);
         while (n<=Rnd)
              cout<<n<< \#';
         n++;
         }
             0# 1# 2# 3#
                                     (ii) 1# 2# 3#
         (iii) 1# 2# 3# 4#
                                     (iv) 1#
```

```
(c)
    Find the output of the following program:
                                                                     (2+2)
    (i)
    void main()
    {
        char poet[20]=; "ShakESpearE"
        for (int i=0;i<strlen(poet);i++)</pre>
           if(islower(poet[i]))
           poet[i]=poet[i-1];
           else if(isupper(poet[i]))
           if(poet[i] = = `S')
                  poet[i]='X'
        cout<<poet;
                      }
    (ii)
    #include <iostream.h>
    #include <ctype.h>
    void main()
    char Mystring[]="What@PUT!";
    for (int I=0 ;Mystring[I]!='\0';I++)
    if(!isalpha(Mystring[I]))
        Mystring[I] = '*';
    else if(isupper(Mystring[I]))
        Mystring[I] = Mystring[I] + 1;
    else
        Mystring [I] = Mystring[I+1];
    cout<<Mystring;</pre>
   Write a user defined function int dectobin (int dec) to convert a number
    from decimal to binary where dec is the decimal no.
                                                                       (3)
```

```
{
T.X-=Step; T.Y+=Step;
T.Z-=Step;
void main()
THREE D T1=\{10,20,5\} T2=\{30,10,40\};
MoveIn(T1);
MoveOut(T2,5);
cout<<T1.X<<","<<T1.Y<<"," <<T1.Z<<endl;
cout<<T2.X<<","<<T2.Y<<"," <<T2.Z<<endl;
}
A structure employee is defined as follows:
                                                                       4
Struct employee
    int ID;
    char name [20];
    float basic;
Define a function int eligible_for_bonus (employee); to return 1 if basic
< 15000, otherwise it should return a 0.
Invoke this function in a program to print a message whether employee
is eligible for bonus or not. (1 = eligible; 0 = not eligible)
```
