- It can be regarded as comparison made between two or more things in order to show their similarity.
- It can also be explained as a similarity between like features of two things (which are otherwise unlike) on which a comparison may be based.

MENTAL ABILITY TEST (MAT)-VII LOGICAL SEQUENCE OF WORDS BASIC CONCEPTS

- 1. In this type of questions, certain interrelated words are given and numbered, followed by various sequences of the numbers denoting them, as alternatives.
- 2. Students are required to arrange these words in a logical sequence based on a common property and then choose the correctly numbered sequence from the given alternatives.
- 3. In other words, in this type of question, some words are given. You have to arrange these words in a meaningful order. The order may be according to age, size and need etc.
- 4. You have to arrange them in the order/sequence they occur/happen in real life.

For eg.

1. Arrange the following in a logical/meaningful sequence:

1. Birth 2. Death 3. Funeral 4. Marriage 5. Education

a. 1,3,4,5,2 b. 1,5,4,2,3 c. 2,3,4,5,1 d. 4,5,3,1,2

Ans. B

Explanation: The given words has to be arranged in the order of various events as they occur in a man's life.

2. Arrange the following in a logical/meaningful sequence:

1. Consultation 2. Illness 3. Doctor 4. Treatment 5. Recovery

a. 2,3,1,4,5 b. 2,3,4,1,5 c. 4,3,1,2,5 d. 5,1,4,3,2

Ans. A

Explanation: **Illness** occurs first. One then goes to a **doctor** and after **consultation** undergoes **treatment** to finally attain **recovery**.

MENTAL ABILITY TEST (MAT) -VII MATHEMATICAL OPERATIONS BASIC CONCEPTS

- 1. This topic deals with questions on simple mathematical operations.
- **2.** Here, the four fundamental operations addition, subtraction, multiplication and division are represented by symbols different from the usual ones.
- **3.** The questions involving these operations are set using artificial symbols. The student has to substitute the real signs and solve the questions accordingly, to get the answer.
- **4.** While solving a mathematical expression, proceed according to the rule BODMAS- i.e. **B**rackets, **O**f, **D**ivision, **M**ultiplication, **A**ddition, and **S**ubtraction.

Type I: Problem solving by substitution

In this type, you are provided with substitutes for various mathematical symbols or numerals, followed by a question involving calculation of an expression.

The student is required to put in the real signs or numerals in the given equation and then solve the questions as required.

For e.g.-If '+' means 'minus', 'x' means 'divided by', '÷' means 'plus' and '-' means 'multiplied by', then which of the following will be value of the expression **252**x**9**-**5**+**32**÷**92**?

a. 95

b. 168

c. 192

d. 200

e. None of these

Ans: d **Explanation:** Putting the proper signs in the given expression, we get:

 $252 \div 9 \times 5 - 32 + 92 = 28 \times 5 - 32 + 92 = 140 - 32 + 92 = 232 - 32 = 200$.

Type II: Interchange of signs and numbers.

In this type, interchanges are made in signs and numbers.

The student is required to make the interchanges in signs and numerals and then solve the question or choose the correct/incorrect equation.

Students may also be asked to choose the appropriate interchanges to make given expression correct.

For e.g.-If the given interchanges namely: signs + & ÷ and numbers 2 & 4 are made in signs and numbers, which one of the following four equations would be correct?

a. $2+4\div3=3$

b. 4+2÷6=1.5

c. $4 \div 2 + 3 = 4$

d. $2+4\div6=8$

Ans. D-**Explanation:** Interchanging (+ & ÷) and (2 & 4), we get

a. $4 \div 2 + 3 = 3$ or 5 = 3, which is false.

b. $2 \div 4 + 6 = 1.5$ or 6.5 = 1.5, which is false.

c. $2+4\div3=4$ or $\frac{--}{--}=4$, which is false.

d. $4 \div 2 + 6 = 8$ or 8 = 8, which is true.

MENTAL ABILITY TEST (MAT)-VII VENN DIAGRAMS BASIC CONCEPTS

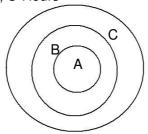

- 1. A Venn diagram (also known as set diagram or logic diagram) is a diagram that shows all possible logical relations between the given elements.
- 2. In this type of test, a diagram is made and according to the question data is filled in the diagram.
- 3. After filling the data, student has to analyse that by which diagram a particular set of elements can be best represented.
- 4. This topic deals with questions which judge student's ability to relate a certain given group of items and depict it by diagram.

Basic types of Venn diagrams:
